

# CONNECTED Systems

NEUDESIC'S CONNECTED SYSTEMS PRACTICE HELPS YOU OPTIMIZE AND AUTOMATE BUSINESS PROCESSES AND SYSTEMS TO IMPROVE EFFICIENCIES, INCREASE AGILITY AND CREATE NEW BUSINESS VALUE FROM EXISTING ASSETS.

## The Neudesic Advantage

- Microsoft Virtual Technology Specialists – more than any other company in the country
- Certified BizTalk Server experts
- Members of international MVP program
- Authors of numerous trade publications and articles
- Thought leadership at industry-wide events, including TechEd, VSLive, Code Camp and .NET user group meetings
- Enterprise Integration with applications, systems and external trading partners

## Technologies

- Neudesic Neuron-ESB (Enterprise Service Bus)
- Microsoft BizTalk Server
- Microsoft Host Integration Server
- Microsoft Business Rule Engine
- Windows Workflow Foundation
- Microsoft BizTalk Server Adapters and Accelerators
- Microsoft Message Queue
- Third Party Adapters

### Applications

- Oracle
- SAP
- Salesforce
- PeopleSoft
- BAAN
- JD Edwards
- Siebel

### Database

- Oracle
- DBz
- SQL

### Technologies

- Covast
- iWay
- TopXML

### Accelerators

- Covast EDI
- HIPAA
- HL7

We deliver Connected Systems solutions that expose systems and software platforms within the enterprise and across business boundaries, improving the value proposition of your technology investments.

Our Connected Systems practice offers comprehensive solutions that minimize ramp-up costs and accelerate project launch schedules. Our EDI accelerators, for example, decrease the time to market and increase ROI for EDI related projects. We also offer a number of re-usable solutions that have been tested in a variety of major integration projects.

### ARE YOUR VALUABLE RESOURCES UNDERUTILIZED?

As enterprises evolve, a wide range of disparate systems, software packages and technology platforms emerge independently. Eventually these systems need to communicate and provide extended value to users and other software systems. As the connected enterprise evolves and advances toward certainty, the extension of systems to one another and across the business landscape becomes both attainable and essential.

Is your enterprise ready to tighten application integration and extend the promise of your technology investments? Ask yourself:

- Is there valuable information that's locked away from users due to rigid application boundaries?
- Do users have difficulty finding information and performing specific operations within your organization?
- Do customers often express confusion or frustration when they try to access resources within your company?
- Do your systems integrate well with partner applications?
- Is broadly used data locked away in data "silos?"
- Do your users waste time switching applications and logging in and out of legacy applications while attempting to perform simple tasks?

Most enterprises have some trouble with these common issues because their enterprise applications are not optimally integrated. Fortunately, a wide range of Connected Systems solutions are now available to help quickly resolve some of the most difficult integration challenges.

### OPTIMIZE SYSTEMS AND EXTEND VALUE

Neudesic's Connected Systems practice has a long history of resolving complex application integration challenges and designing optimal solutions. We have successfully delivered more BizTalk Server and Host Integration Server solutions than any other firm in California. We are consistently called upon by Microsoft to assist with training, sales, design reviews, Architectural Design Sessions, Proof of Concepts, and implementation analysis and remediation.

The Neudesic Connected Systems practice consists of individuals with a diverse range of connected systems experience and product/solution exposure. Neudesic has earned the unique privilege of extensive access to internal Microsoft resources. These resources are often called upon to provide targeted support for specific challenges. At times, we interact directly with key engineers that have written the original Microsoft product code. This exclusive access sets us apart from competitors and enables us to provide the highest level of support to our customers.
